## ABSTRACT

The 1972-73 Enrollment and Attendance Report provides a history of enrollment and average daily attendance (ADA) for the District and each college for the last ten years. In some instances, the data presented are not complete for the full ten years due to the lack of historical records. In others, a deliberate attempt was made only to summarize 1972-73 data. Also included in this report are various characteristics of our students such as sex, age, number of hours carried, status (new or continuing, freshmen or sophomores), and ethnic background. While changes in totals have not been significant, several changes in the characteristics of our students have occurred this last year: (1) students are taking fewer hours of class; (2) despite increased numbers of veterans, fewer males are attending, yet the number of females has increased; (3) there are fewer students under 21, but a greater number of students over 21; (4) we have fewer new students and fewer sophomores; (5) we have fewer resident other-than adult students (OTA), the type the State-apportionment formula heavily supports, and more defined adults (DA), the type the State-apportionment formula supports, less adequately. ## ABSTRACT

The 1972-73 Enrollment and Attendance Report provides a history of enrollment and average daily attendance (ADA) for the District and each college for the last ten years. In some instances the data presented is not complete for the full ten years due to the lack of historical records. In others, a deliberate attempt was made only to summarize 1972-73 data. Also included in this report are various characteristics of our students such as sex, age, number of hours carried, status (new or continuing, freshmen or sophomores), and ethnic background.

While it was expected that the rate of growth in the Los Angeles Community College District would slow down in 1972-73, the actual growth rate was significantly smaller than anticipated. Average daily attendance grew only 0.2%, while Fall enrollment by headcount was up only 1.2%. Thus the District may have experienced the end of a period of rapid growth. Noteworthy is the fact that from 1959-1972 the District has doubled its student body size. It is not likely, for the near term at least, that a further significant increase in enrollment will occur.

While changes in totals have not been significant, several changes in the characteristics of our students have occurred this last year: (1) students are taking fewer hours of class, (2) despite increased numbers of veterans, fewer males are attending, yet the number of females has increased, (3) there are fewer students under 21, but a greater number of students over 21, (4) we have fewer new students and fewer sophomores, (5) we have fewer resident other-than-adult students (OTA), the type the State-apportionment formula heavily supports, and more defined adults (DA), the type the State-apportionment formula supports less adequately.

GLOSSARY  
(Alphabetical)

Average Daily Attendance (ADA) is the measure from which the amount of State apportionment is calculated. A student enrolled full-time for two semesters would generate approximately 0.8 units of ADA. For evening classes, ADA is computed from positive attendance hours. For day classes, ADA is computed from enrolled weekly student contact hours. The evening method makes data collection more difficult and results in relatively lower ADA than the day method.

Apportionment ADA is the ADA used by the State to calculate apportionment, and is based on a reporting period which differs from the school year.

Attendance ADA is the ADA calculated for semester of the school year in order to have figures directly comparable to other measurements reported by semester.

Average Weekly Student Contact Hours per Student is the total enrolled weekly student contact hours divided by the total enrollment.

Census is a fixed date during the school term at which time counts of weekly student contact hours (see Weekly Student Contact Hours) and enrollment are taken for official State reporting purposes.

Continuing Student for the purposes of this report is one who is enrolled in college in the semester reported and also was enrolled in any preceding semester.

Day Classes ("graded") convene prior to 4:30 P.M.

Defined Adult (DA) is a student who is 21 years of age or older, and is enrolled for less than 10 weekly student contact hours.

Enrollment is a "headcount" of each student regardless of the number of weekly student contact hours or units for which he or she is enrolled.

Ethnic Background in this report refers to racial affiliation and is self-determined by the student on a voluntary basis. "Did not state" students have been allocated proportionate to responding students in order that a year-to-year comparison might be possible.

Evening Classes (adult, "ungraded") classes convene at 4:30 P.M. or later. The only present exceptions are trade (apprenticeship) classes and Sheriff's Academy classes, which are classified as "extended day" classes, and for which ADA is computed as for day classes.

First-Time Student is one who has not attended any college before the semester of the enrollment report.

Freshmen are those students who, at the time of registration, have completed less than 30 semester units of college credit.

Full-Time Student for enrollment purposes is one who is carrying 12 units or more.

Other-Than-Defined Adult (OTA) is a student who is either under 21 years of age or enrolled for 10 or more weekly student contact hours. Resident OTA for apportionment purposes is one who is a resident of this District regardless of the District which the student actually attends.

Part-Time Student for enrollment purposes is one who is carrying less than 12 units.

Sophomore is a student who, at the time of registration, has completed 30 or more semester units of college credit.

Weekly Student Contact Hours are derived from the number of students enrolled in a class times the number of hours per week which the class meets ("class hours"). One student in a class which meets three hours per week would generate three weekly student contact hours. Often the class hours correspond to the number of units credited. For laboratory classes, the weekly student contact hours usually exceeds the units of credit.

DISTRICT STATISTICS

## DISTRICT ENROLLMENT SUMMARY

The inferences concerning enrollment patterns discussed in this section are limited by lack of historical data for components of the total enrollment. On the other hand, enrollment, particularly in community colleges, is likely to be immediately affected by continuous social changes. It is these relationships which best lend themselves to examination at this time.

In terms of actual numbers, since 1963, total enrollment has been steadily increasing. However, the years 1972-73 show a slight decrease in day-time enrollment (-0.2%) for the first time since 1963. There seems to be no consistent trend for District evening enrollment, with decreases evident from time to time. The District day enrollment has increased at a faster rate than evening enrollment.

Full-time enrollment has markedly declined during the past year, while part-time enrollment has been increasing for the past two years.<sup>1</sup> The numerical increase in part-time enrollment exceeded the decrease in full-time enrollment. The age group of under 21 has declined by 4.8% in enrollment. The 21 and over group has to have responsibilities such as self-support and families which could hinder their pursuit of full-time education. There may be other explanations for the correlation between the decline in under-21 enrollment and full-time enrollment since that age group generally attends college on a full-time basis. For example, it could be that: (1) more high school graduates are going directly into jobs or to four-year colleges, and (2) working adults are finding it increasingly necessary to further their education in order to qualify and train for more lucrative careers.

---

1 Total enrollment is simply a headcount and disregards the number of classes in which a student is enrolled. Full-time enrollment does discriminate those registered for twelve or more units.

Possibly related to these observations is the fact that percentage-wise, more vocational/business courses are offered in the evening than in the day.

Overall, it appears that our colleges are serving a more varied population than in the past. This is possibly due to the increased tendency of adults to return to college after employment and to the expansion of community services at the colleges. It is interesting to note that despite an increase in the number of veterans returning to school, there was a slight decrease in male enrollment for 1972-73. On the other hand, female enrollment has experienced a marked increase in the last two years. This increase may be due to a combination of a raised level of women's educational aspirations and the fact that increasing numbers of women are also finding it necessary to enhance their job-market potential by continuing their education.

Our data demonstrates that while the overall freshmen and continuing student categories have shown increases, first-time freshmen and sophomores have declined. This would seem to indicate a lower persistence level based upon: (1) fewer students returning to school after the first year or first semester, and (2) more students taking fewer hours per semester and subsequently not advancing as rapidly to sophomore status. The decline in first-time freshmen appears related to the decline in the under-21-age-group. The increase in freshmen may be due to a greater number of students continuing in freshmen standing and an increased number of students returning as freshmen.

## AVERAGE DAILY ATTENDANCE SUMMARY

An analysis of the average daily attendance trends for the past ten years would appear to indicate that year-to-year changes are irregular. Three events may have accounted for the larger distortions:

1. The end of the draft in 1971-72: the absence of this incentive for males to remain full-time students was evident in the large increase of defined adults in day classes.
2. The introduction of adult fees in 1970-71 perhaps resulting in a large decrease in evening ADA for defined adults.
3. A new method of computation for adult class attendance in 1970-71 which decreased the evening ADA in comparison to the previous method. This resulted in the evening ADA prior to 1970-71 being almost one and one-half times that shown by the newer method.

Day classes account for approximately 75% of the District ADA; (1972-73) evening classes account for the remaining 25%. The evening program percentage has been increasing over the past five years. Other than defined adults (OTA) constitute approximately 94% of the day program and approximately 53% of the evening program. There has been a trend for day percentages of OTA to be decreasing and for evening percentages to be increasing. The remaining ADA, defined adults (DA), has the converse trend. In eight of the past ten years, Fall semester ADA has been greater than Spring semester; 1972-73 was one exception to the trend. Generally, day ADA has decreased from Fall to Spring, while evening ADA has increased from Fall to Spring. These Fall/Spring changes are significant and should be taken into consideration in much of the planning based upon Fall-to-Fall trends.

Unfortunately, for budget planning, our findings illustrate that the attendance pattern in Spring semester has been less variable than in the Fall. One factor for this is the relatively large and consistent increases in evening class attendance from Fall to Spring, while day class attendance from Fall to Spring has a less predictable pattern. Thus, we cannot rely on the Fall as an indication on what will happen in the Spring. Research into other reasons for this and related phenomena could prove valuable in our attempts to better serve the needs of the community.

## AVERAGE DAILY ATTENDANCE (APPORTIONMENT)

Total apportionment average daily attendance (ADA) increased 0.3% in 1972-73, but the dollar amount of apportionment decreased 2.5%. This non-correspondence in the percentage changes occurs because the apportionment formula allows a much higher rate for a small portion of residents other-than-adults (OTA).<sup>1</sup> This category of ADA decreased 2.1% in 1972/73.

It is to be noted that recently resident OTA has had a considerably slower growth rate than other categories of ADA. Evolving trends and attitudes indicate that this difference will continue or be augmented by the recruitment of students from segments of the community who have not previously had high participation rates of community college attendance - primarily more adults from a greater age range. The State apportionment formula is oriented toward the more traditional concept of students as young, recent high school graduates attending college full-time. It does not adequately support more innovative programs reaching out to the entire community. Since our other major source of income is property tax, the problem of support for non-traditional programs becomes a serious one.

Apportionment ADA is based on a reporting period which does not correspond to the school year. For this reason certain trends are more evident in school-year attendance ADA which can be attributed to a certain semester and day or evening students.

---

1 The rate has been \$662 per ADA for the last 3,156 ADA of the 59,732 ADA in the category of resident OTA. The reason why the \$662 rate was applied to the last 3,156 is that the State formula expects District wealth (in the form of property taxes) to provide for a certain number of adjustments. This number is determined by dividing total modified assessed valuation by District support per ADA.
